Autumn 2012, Fridays: 10:00–12:00: WTA & 15:00–17:00: WHB 300

# Bits and Bytes

## Bits

A bit:

- ▶ 0 or 1; (“binary digit”, or a digit in base 2)
- ▶ unit in storage or communication; (the space or time it takes to transmit something which can be either a 0 or a 1)
- ▶ information unit. (*The quantity of information to distinguish two equiprobable mutually exclusive states*)

The unit is sometimes abbreviated as ‘b’.

The bit is the fundamental building block of *digital* (as opposed to *analogue*) computing.

# Bits and Bytes

## Bytes

A byte:

- ▶ originally, simply a collection of bits
- ▶ now commonly used for specifically 8 bits (“octets”)

The unit is sometimes abbreviated as ‘B’.

|   |   |   |   |   |   |   |   |
|---|---|---|---|---|---|---|---|
| 0 | 1 | 1 | 1 | 0 | 1 | 0 | 1 |
|---|---|---|---|---|---|---|---|

An 8-bit byte (if interpreted as an integer, representing the number 117)

Derived units:

- ▶ *nybble*: 4 bits
- ▶ *crumb*: 2 bits

# Units and Prefixes

## SI Prefixes

| Prefix     | Value              |
|------------|--------------------|
| kilo- (k)  | $1000 = 10^3$      |
| mega- (M)  | $1000^2 = 10^6$    |
| giga- (G)  | $1000^3 = 10^9$    |
| tera- (T)  | $1000^4 = 10^{12}$ |
| peta- (P)  | $1000^5 = 10^{15}$ |
| exa- (E)   | $1000^6 = 10^{18}$ |
| zetta- (Z) | $1000^7 = 10^{21}$ |
| yotta- (Y) | $1000^8 = 10^{24}$ |

Examples:

- ▶ kilogram (one thousand grams)
- ▶ megaton (equivalent of one million tons of TNT)
- ▶ gigahertz (one thousand million per second)

# Units and Prefixes

## Binary Prefixes

| Prefix     | Value             |
|------------|-------------------|
| kibi- (ki) | $1024 = 2^{10}$   |
| mebi- (Mi) | $1024^2 = 2^{20}$ |
| gibi- (Gi) | $1024^3 = 2^{30}$ |
| tebi- (Ti) | $1024^4 = 2^{40}$ |
| pebi- (Pi) | $1024^5 = 2^{50}$ |
| exbi- (Ei) | $1024^6 = 2^{60}$ |
| zebi- (Zi) | $1024^7 = 2^{70}$ |
| yobi- (Yi) | $1024^8 = 2^{80}$ |

Effectively only used with bytes: MiB, GiB are the most common.

# History

## Storage Devices

Punch cards:

Wikimedia Commons (user Ghw)  
Public Domain

Each hole position: one bit

# History

## Storage Devices

Tape:

Wikimedia Commons (user Poil)  
CC-BY-SA 3.0

About 1000 bits per inch (1951), about  $10^8$  (2007)  
Modern tape drives: low cost per bit, high capacity (1 TB)

# History

## Storage Devices

Floppy disks:

Wikimedia Commons  
CC-BY-SA 3.0

(user Brokensegue)  
CC-BY-SA 3.0

175kB (1972), 1.44MB (1987)

Now rarely used: small capacity, bulky, easily damaged.

# History

## Storage Devices

Hard disks:

WP:Dave Indesch  
CC-BY-SA 3.0

5MB (1980), 1GB (1995), 1TB (2007), 4TB (2012)  
Concern: capacity has outstripped access/seek times

# History

## Storage Devices

### Optical Media:

Wikimedia Commons (user flip619)  
CC-BY-SA 2.5

CD: 600MB (1985); DVD: 4.7GB (1995)  
HD DVD: 30GB (2006); Blu-Ray: 50GB (2006)  
(Blu-Ray won in 2008: now up to 150GB)

# History

## Storage Devices

### Solid-state Drives:

Wikimedia Commons (user D-Kuru)  
CC-BY-SA 3.0 (Austria)

Fast, quiet

Concern: lifetime of data storage, wearing out

# Binary integers

## Place-value systems

We write numbers so that their relative placement indicates their value:

1        7        2

# Binary integers

## Place-value systems

We write numbers so that their relative placement indicates their value:

$$\begin{array}{ccc} 1 & 7 & 2 \\ & & \uparrow \\ & & 2 \times 1 \end{array}$$

# Binary integers

## Place-value systems

We write numbers so that their relative placement indicates their value:

$$\begin{array}{ccc} 1 & 7 & 2 \\ & \uparrow & \uparrow \\ & 7 \times 10 & 2 \times 1 \end{array}$$

# Binary integers

## Place-value systems

We write numbers so that their relative placement indicates their value:

$$\begin{array}{ccc} 1 & 7 & 2 \\ \uparrow & \uparrow & \uparrow \\ 1 \times 100 & 7 \times 10 & 2 \times 1 \end{array}$$

# Binary integers

## Binary representation

1 0 1 0 1 1 0 0

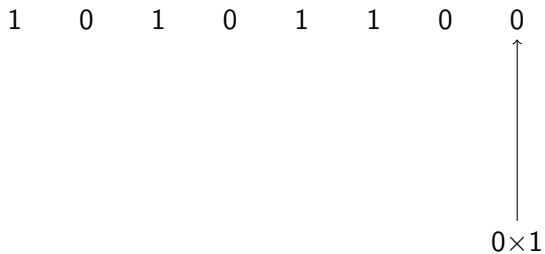

# Binary integers

## Binary representation

1 0 1 0 1 1 0 0

$0 \times 1$

# Binary integers

## Binary representation

1 0 1 0 1 1 0 0

$0 \times 2$   $0 \times 1$

The diagram illustrates the binary representation of the integer 101100. The digits are arranged horizontally from left to right. Below the 7th digit (0) is the label  $0 \times 2$ , and below the 8th digit (0) is the label  $0 \times 1$ . Two vertical arrows point upwards from these labels to their respective digits, indicating their positional weights in the binary system.

# Binary integers

## Binary representation

# Binary integers

## Binary representation

# Binary integers

## Binary representation

# Binary integers

## Binary representation

# Binary integers

## Conversion between bases

Two methods:

- ▶ Multiply out;
- ▶ Repeated division.

# Binary integers

## Conversion between bases

Multiply out:

- ▶ already seen binary to decimal
- ▶ example: convert decimal 42 to binary:

$$\begin{aligned}(42)_{10} &= (4)_{10} \times (10)_{10} + (2)_{10} \\ &= (100)_2 \times (1010)_2 + (10)_2 \\ &= (101000)_2 + (10)_2 \\ &= (101010)_2\end{aligned}$$

# Binary integers

## Conversion between bases

Repeated division:

$$(42)_{10} = 2 \times (21)_{10} \text{ remainder } 0$$

$$(21)_{10} = 2 \times (10)_{10} \text{ remainder } 1$$

$$(10)_{10} = 2 \times (5)_{10} \text{ remainder } 0$$

$$(5)_{10} = 2 \times (2)_{10} \text{ remainder } 1$$

$$(2)_{10} = 2 \times (1)_{10} \text{ remainder } 0$$

$$(1)_{10} = 2 \times (0)_{10} \text{ remainder } 1$$

Read off the remainders in sequence, right to left.

# Binary integers

## Hexadecimal notation

- ▶ Binary notation is wasteful of space;
- ▶ Long strings of digits hard to understand;
- ▶ Often convenient to use hexadecimal instead.

| dec | hex | bin  | dec | hex | bin  |
|-----|-----|------|-----|-----|------|
| 0   | 0   | 0000 | 8   | 8   | 1000 |
| 1   | 1   | 0001 | 9   | 9   | 1001 |
| 2   | 2   | 0010 | 10  | a   | 1010 |
| 3   | 3   | 0011 | 11  | b   | 1011 |
| 4   | 4   | 0100 | 12  | c   | 1100 |
| 5   | 5   | 0101 | 13  | d   | 1101 |
| 6   | 6   | 0110 | 14  | e   | 1110 |
| 7   | 7   | 0111 | 15  | f   | 1111 |

# Binary arithmetic

## Arithmetic Tables

Addition:

|   |   |    |
|---|---|----|
| + | 0 | 1  |
| 0 | 0 | 1  |
| 1 | 1 | 10 |

# Binary arithmetic

## Arithmetic Tables

Subtraction:

|   |   |    |
|---|---|----|
| — | 0 | 1  |
| 0 | 0 | -1 |
| 1 | 1 | 0  |

# Binary arithmetic

## Arithmetic Tables

Multiplication:

|   |   |   |
|---|---|---|
| × | 0 | 1 |
| 0 | 0 | 0 |
| 1 | 0 | 1 |

# Binary Arithmetic

## Examples

# Binary Logic

Binary logic operates on binary numbers:

- ▶ 0 is conventionally 'false'; 1 is 'true';
- ▶ operations can have 1 or more inputs
- ▶ outputs are logical operations on the inputs

# Binary Logic

Binary logic operates on binary numbers:

- ▶ 0 is conventionally 'false'; 1 is 'true';
- ▶ operations can have 1 or more inputs
- ▶ outputs are logical operations on the inputs

Logic circuits are built from components called logic *gates*, implementing logical or Boolean operations:

- ▶ common elements: AND, OR, NOT
- ▶ primitives: NAND, NOR

# Binary Logic

## Logic Gates: NOT

NOT relation implemented by a logic gate:

| A | X |
|---|---|
| 0 | 1 |
| 1 | 0 |

Notation:  $X = \neg A$ ;  $\bar{A}$ ;  $A'$

# Binary Logic

## Logic Gates: AND

AND relation implemented by a logic gate:

| A | B | X |
|---|---|---|
| 0 | 0 | 0 |
| 0 | 1 | 0 |
| 1 | 0 | 0 |
| 1 | 1 | 1 |

Notation:  $X = A \wedge B$ ;  $A \cdot B$ ;  $A \times B$

# Binary Logic

## Logic Gates: OR

OR relation implemented by a logic gate:

| A | B | X |
|---|---|---|
| 0 | 0 | 0 |
| 0 | 1 | 1 |
| 1 | 0 | 1 |
| 1 | 1 | 1 |

Notation:  $X = A \vee B$ ;  $A + B$

# Binary Logic

## Logic Gates: XOR

XOR relation implemented by a logic gate:

| A | B | X |
|---|---|---|
| 0 | 0 | 0 |
| 0 | 1 | 1 |
| 1 | 0 | 1 |
| 1 | 1 | 0 |

Notation:  $X = A \oplus B$

# Binary Logic

## Logic Gates: NAND

NAND relation implemented by a logic gate:

| A | B | X |
|---|---|---|
| 0 | 0 | 1 |
| 0 | 1 | 1 |
| 1 | 0 | 1 |
| 1 | 1 | 0 |

Notation:  $X = \overline{A \wedge B}$

# Binary Logic

## Logic Gates: NOR

NOR relation implemented by a logic gate:

| A | B | X |
|---|---|---|
| 0 | 0 | 1 |
| 0 | 1 | 0 |
| 1 | 0 | 0 |
| 1 | 1 | 0 |

Notation:  $X = \overline{A \vee B}$

# Binary Logic

## Logic Gates: NOR as primitive

# Binary Arithmetic

## Sum and Carry: Half Adder

| A | B | S | K |
|---|---|---|---|
| 0 | 0 | 0 | 0 |
| 0 | 1 | 1 | 0 |
| 1 | 0 | 1 | 0 |
| 1 | 1 | 0 | 1 |

# Binary Arithmetic

## Sum and Carry: Half Adder

| A | B | S | K |
|---|---|---|---|
| 0 | 0 | 0 | 0 |
| 0 | 1 | 1 | 0 |
| 1 | 0 | 1 | 0 |
| 1 | 1 | 0 | 1 |

# Binary Arithmetic

## Sum and Carry: Full Adder

| A | B | C | S | K |
|---|---|---|---|---|
| 0 | 0 | 0 | 0 | 0 |
| 0 | 0 | 1 | 1 | 0 |
| 0 | 1 | 0 | 1 | 0 |
| 0 | 1 | 1 | 0 | 1 |
| 1 | 0 | 0 | 1 | 0 |
| 1 | 0 | 1 | 0 | 1 |
| 1 | 1 | 0 | 0 | 1 |
| 1 | 1 | 1 | 1 | 1 |

- ▶ S & K...
  - ▶ S is 1 if there are an odd number of 1s in A,B,C
  - ▶ K is 1 if there are two or more 1s in A,B,C
- ▶ or...
  - ▶ S is  $A \oplus B \oplus C$
  - ▶ K is  $(A \wedge B) \vee ((A \oplus B) \wedge C)$
